MPA series of connections for audio systems is composed of plugs and sockets for cable or panel mounting, with models having 13 to 150 pins.
MPA connectors are manufactured with cadmium-plated aluminium, subject to galvanic treatment and coated according to MIL standards.
A 3-ramps bayonet coupling grants a safe fastening. The low-resistance pin connection prevents any attenuation or alteration of audio line/microphone signals.
Matte-black caps are also available in order to protect plugs and sockets from mechanical stress.
Cable-press and crimp or solder contacts (silver or gold plated depending on model) are included with each connector.
